

YOU CAN CHANGE THE FUTURE

In Minnesota, less than 60% of eighth graders are proficient in math. This means too many students lack the skills they need to be successful in high school algebra — a gateway course for higher education and career success. Together, we can help students solve problems for life!

JOIN MINNESOTA MATH CORPS

Open up a world of opportunity by supporting students in building math skills. Work with pairs of elementary, middle or junior high school students during the school day as they gain confidence and succeed in math.

Receive great training and support. No teaching experience required.
